AGILE DELIVERY APPROACH

Power BI Project — RouteWise Logistics Dashboard

ROUTEWISE LOGISTICS

Transparency | Collaboration | Iteration | Continuous Delivery

BUSINESS OBJECTIVE

Improve visibility into logistics performance by monitoring deliveries, SLAs, delays, costs and returns to support data-driven decision-making and the continuous improvement of operational processes.

METHODOLOGY

- Incremental deliveries
- Prioritisation based on business value
- Focus on the end user
- Continuous improvement

SPRINT PLAN

SPRINT 1
01-07 Jun

Data Preparation & Modelling

- Import and validate the dataset
- Clean and transform data in Power Query
- Handle null values and inconsistencies
- Create calculated columns
- Build the data model
- Validate the data

DELIVERABLE

Clean data model ready for analysis

SPRINT 2
08-14 Jun

KPI Development & Dashboard

- Create DAX measures
- Develop the main KPIs
- Create the Executive Overview page
- Build performance charts and visuals
- Add dynamic slicers and filters
- Validate the KPIs against the data source

DELIVERABLE

First functional version of the dashboard

SPRINT 3
15-21 Jun

Process Analysis & Improvement

- Map the AS IS process using BPMN
- Identify pain points
- Map the TO BE process using BPMN
- Map KPIs to each process stage
- Improve storytelling
- Prepare the documentation and publication

DELIVERABLE

Final dashboard with process analysis and documentation

KANBAN BOARD

TO DO	IN PROGRESS	DONE
Add advanced SQL analysis	Improve the GitHub README	Data cleaning and preparation
Create a drill-through detail page	Review DAX measures	Relational data model
Improve page tooltips	Create business-rules documentation	Main DAX measures
Add delay forecasting using time-series analysis		Executive Overview page
		AS IS / TO BE BPMN

PRODUCT BACKLOG – USER STORIES

ID	USER ROLE	I WANT TO...	SO THAT...	PRIORITY
US01	Operations Manager	view the total number of orders	monitor operational volume	High
US02	Logistics Supervisor	identify delayed orders	act quickly	High
US03	Business Analyst	monitor delivery SLA	assess operational performance	High
US04	Finance Analyst	analyse average delivery cost	control logistics expenses	Medium
US05	CX Manager	monitor returns	identify recurring issues	Medium
US06	Operations Manager	filter by region, carrier, and period	analyse the causes of deviations	High
US07	Business Analyst	visualise the AS IS and TO BE processes	link KPIs to process improvement	High

ACCEPTANCE CRITERIA — EXAMPLE (US03)

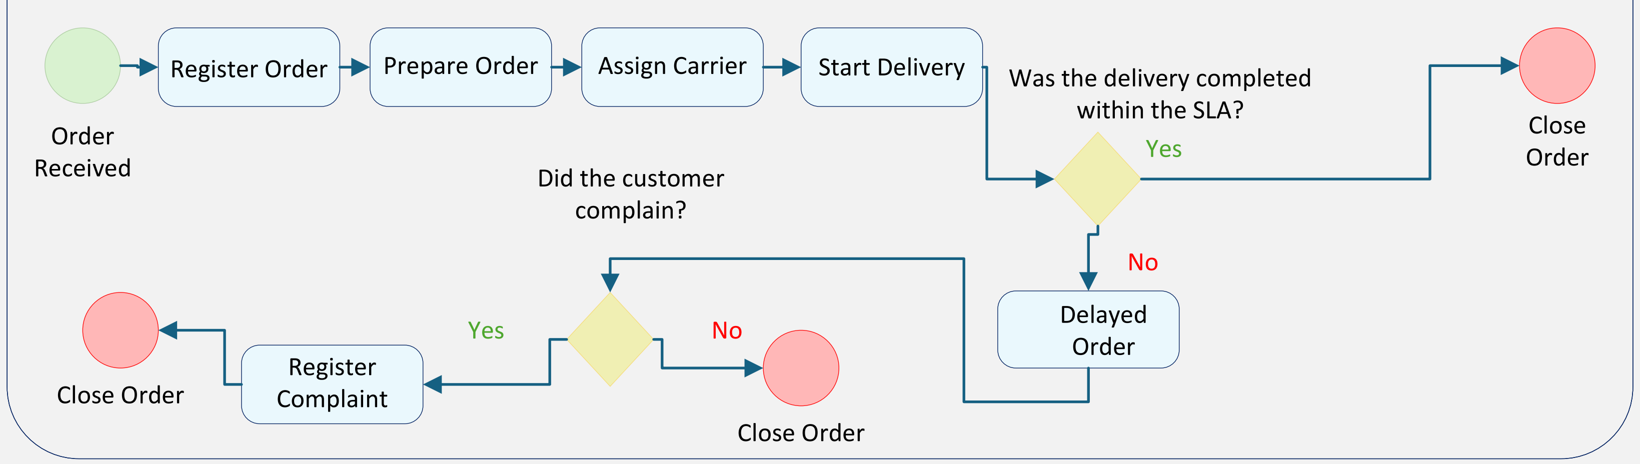
User Story: As a Business Analyst, I want to monitor the delivery SLA to assess operational performance.

- The dashboard must display the Delivery SLA KPI (%);
- The user must be able to filter by month, region and carrier;
- Deliveries outside the SLA must be clearly visible;
- The SLA calculation must exclude cancelled orders;
- The KPI must be validated against the data source.

KPIs TRACKED IN THE DASHBOARD

- **Total Orders**
- **Delivered Orders**
- **Delayed Orders**
- **Delivery SLA (%)**
- **Avg Delivery Time**
- **Avg Delivery Cost**
- **Return Rate**
- **Customer Complaints**

PROCESS MAPPING (BPMN) – AS IS – CURRENT PROCESS



DELIVERABLES & OUTCOMES

PROJECT DELIVERABLES

- Power BI Dashboard (.pbix)
- Cleaned Dataset (.xlsx / .csv)
- Documented DAX Measures
- BPMN Processes (AS IS / TO BE)
- Project Documentation (PDF)
- README and GitHub Publication

RESULTS & BENEFITS

- Clear visibility into logistics performance
- Rapid identification of delays and deviations
- Improved SLA compliance
- Reduced operational costs
- Data-driven decisions based on reliable information
- Mapped and optimised processes

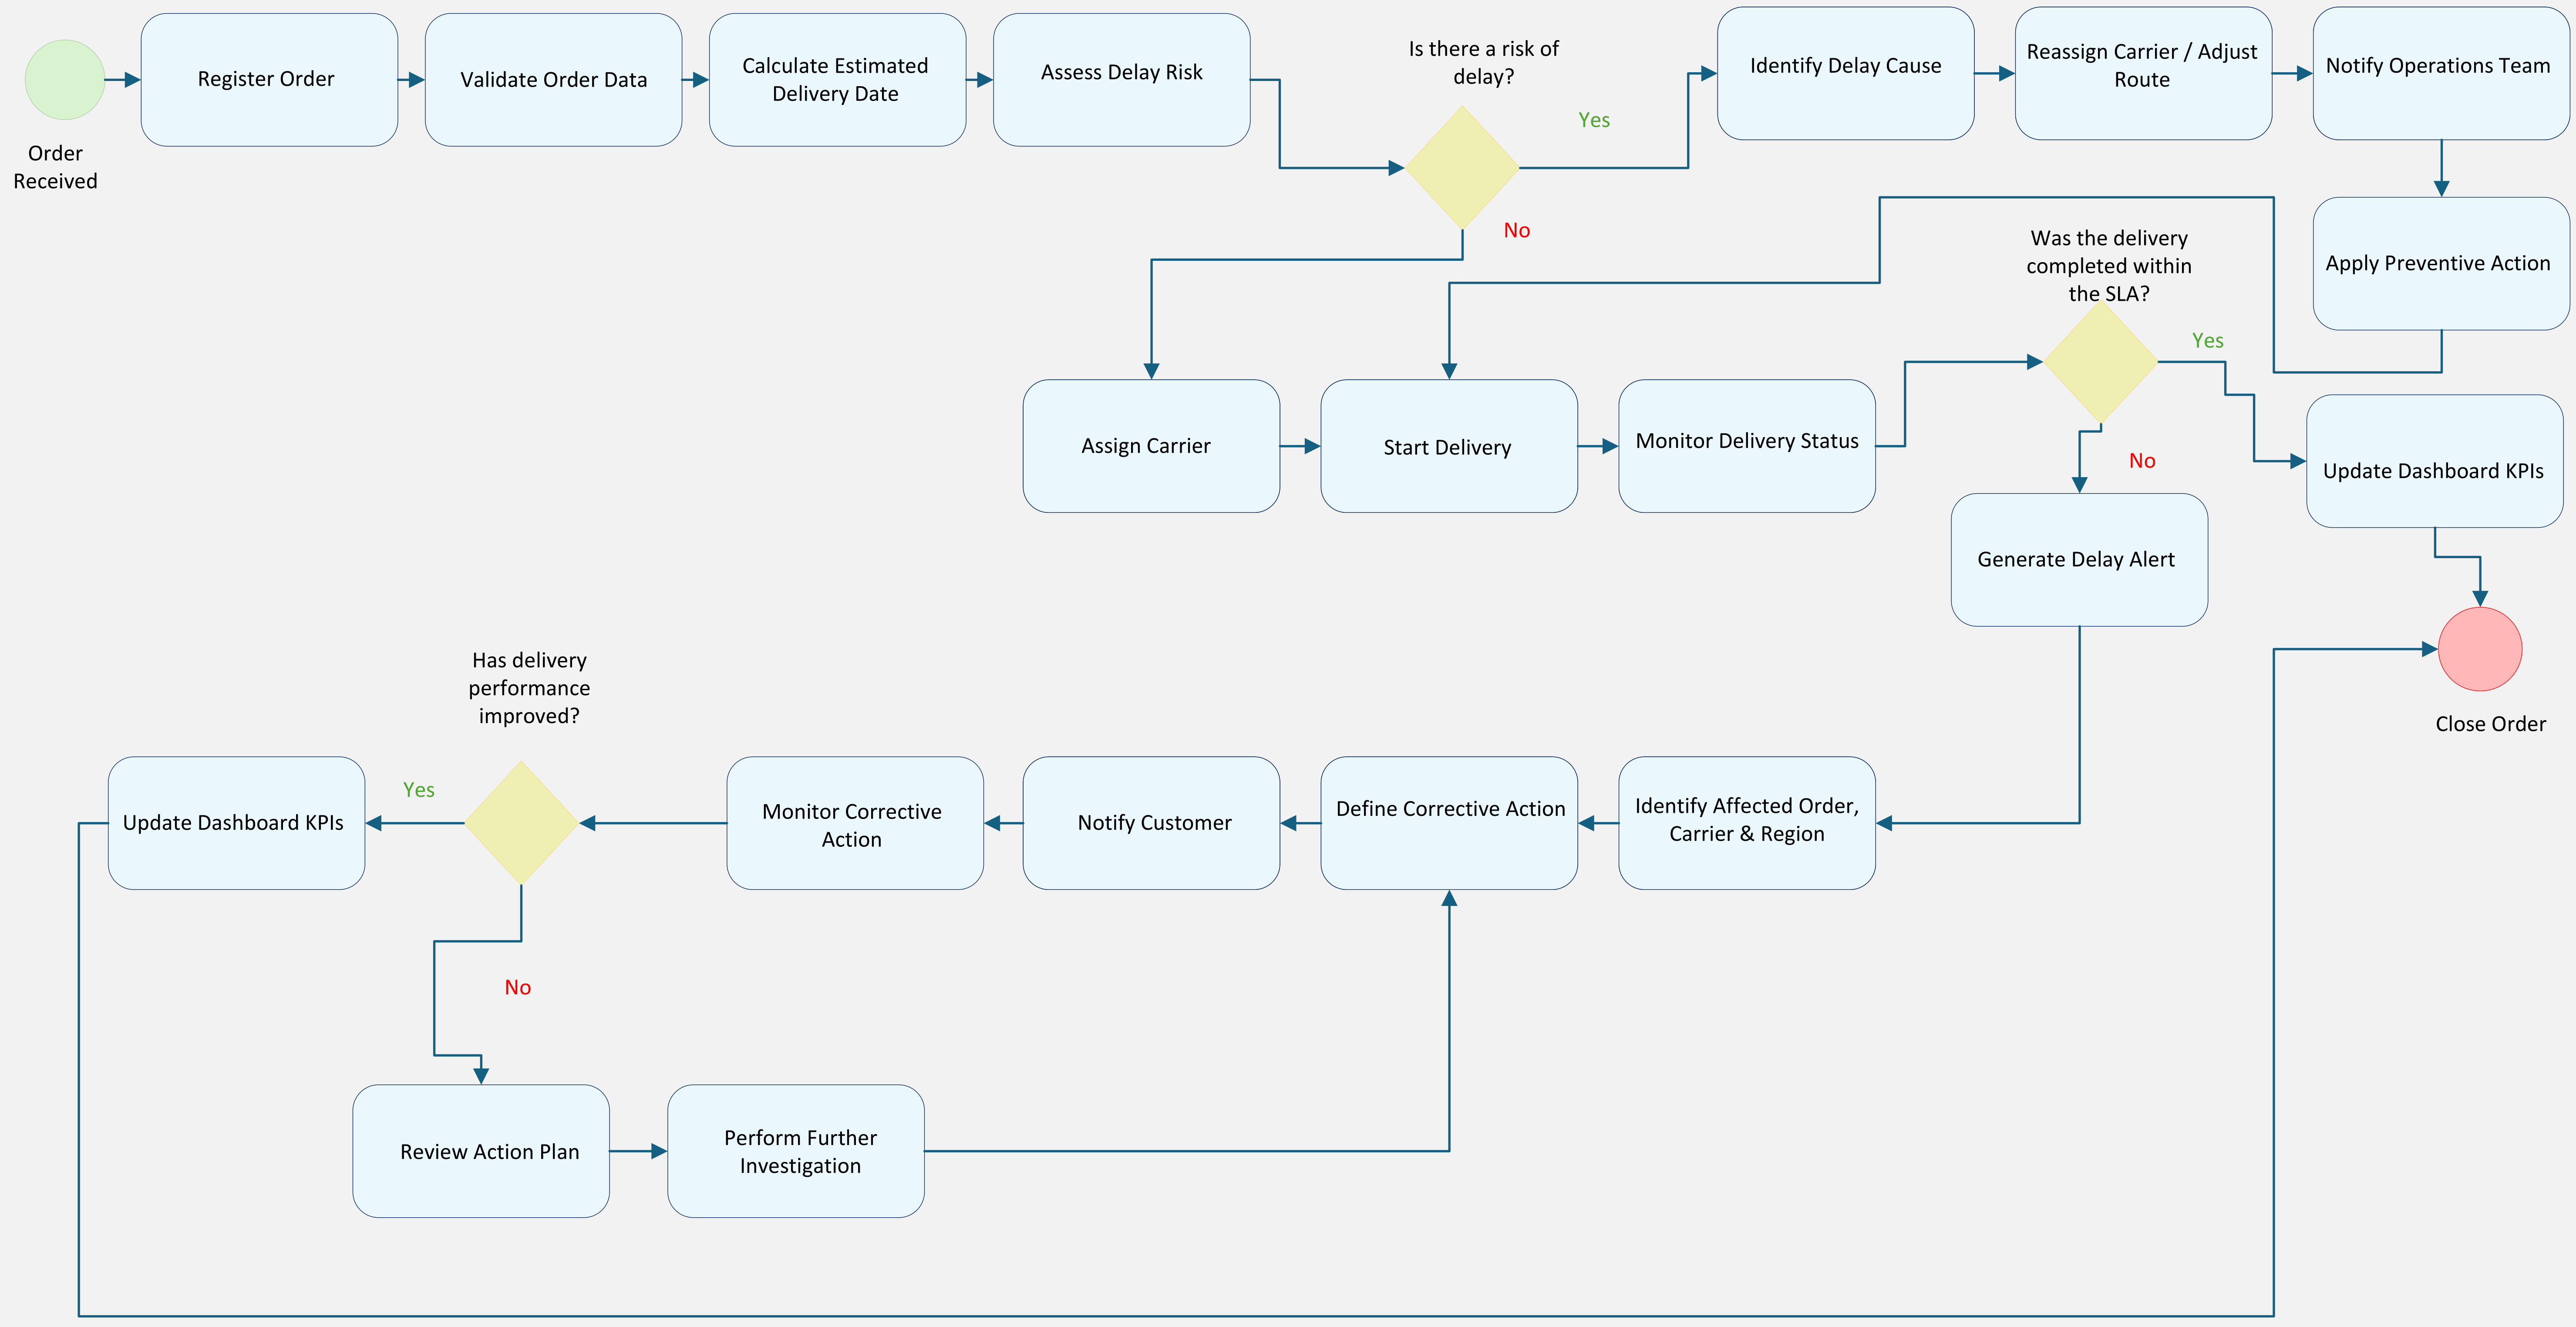
ROUTEWISE LOGISTICS

AGILE DELIVERY APPROACH

Power BI Project — RouteWise Logistics Dashboard

Transparency | Collaboration | Iteration | Continuous Delivery

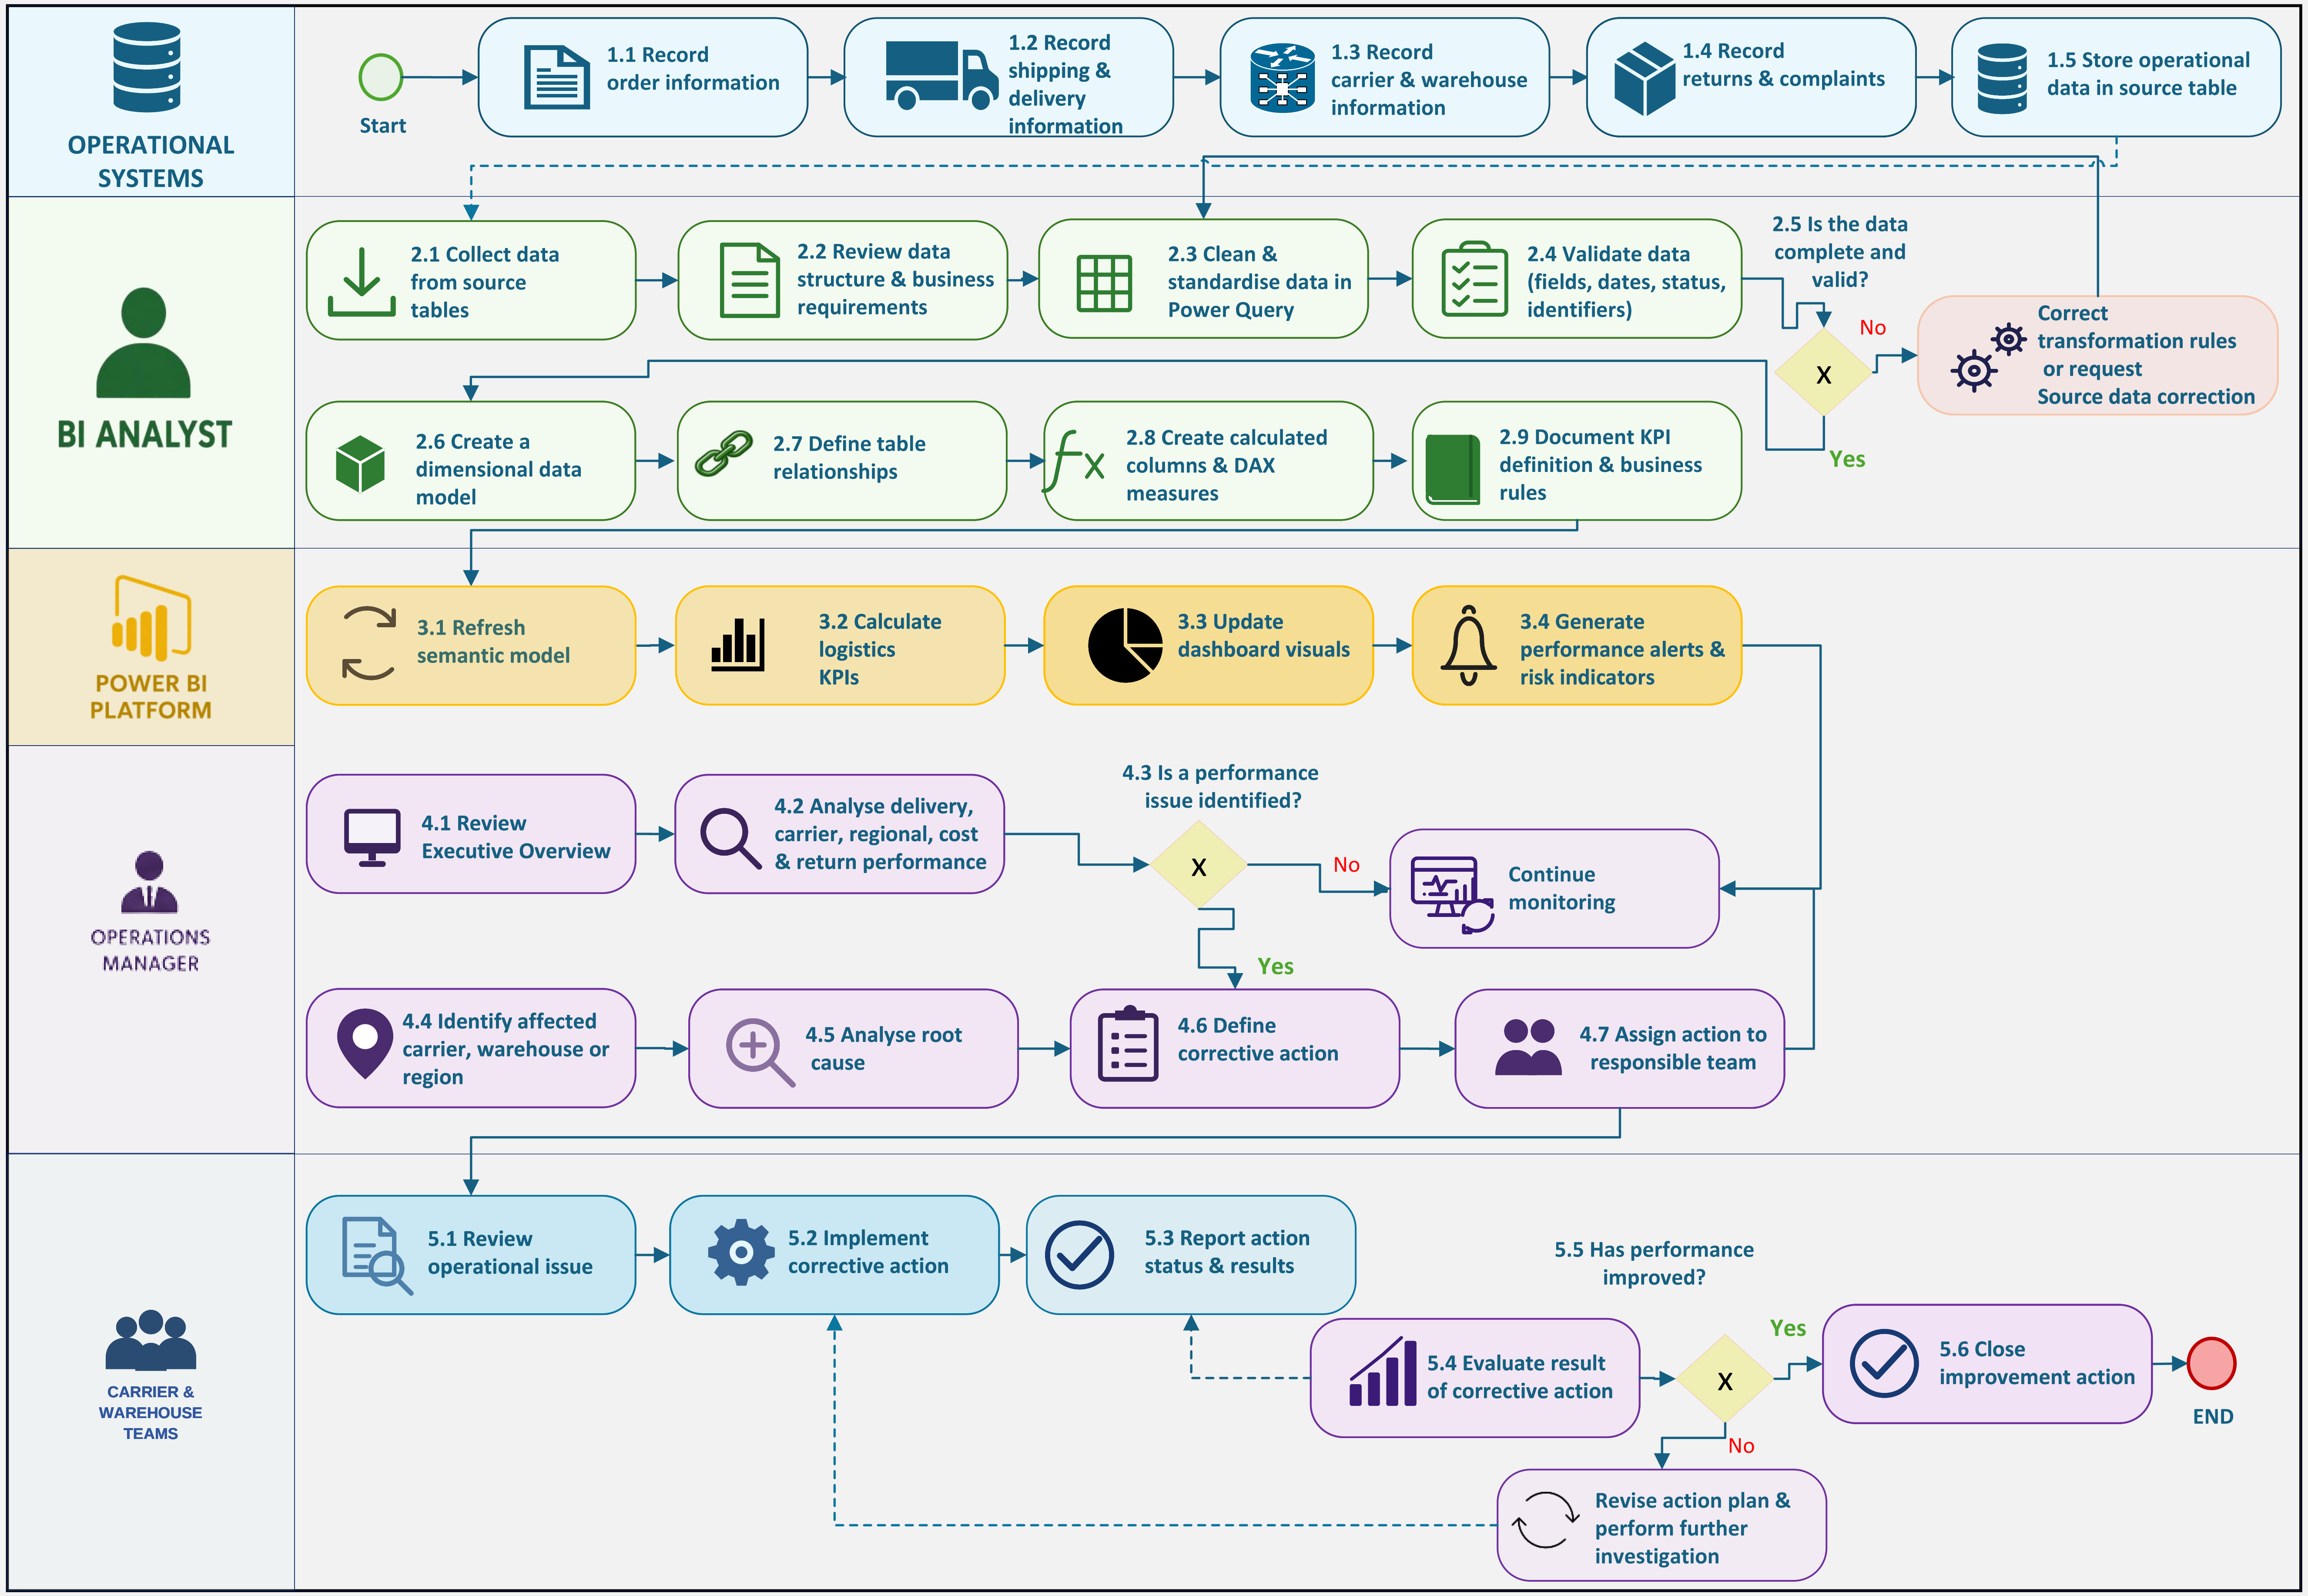
PROCESS MAPPING (BPMN) – TO BE – IMPROVED PROCESS



ROUTEWISE LOGISTICS

LOGISTICS PERFORMANCE AND IMPROVEMENT PROCESS (BPMN)

RouteWise Logistics – End-to-End Process for Data to Insights and Continuous Improvement



LEGEND

- Start Event
- End Event
- Task (System)
- Task (User/Analyst)
- Task (Platform)
- Task (Manager)
- Task (Team)
- Exclusive Gateway
- Sequence Flow
- Data Flow

PROCESS OBJECTIVE

To transform operational logistics data into validated performance indicators, identify critical issues and support corrective actions.

KEY BENEFITS

- Data quality and validation
- Reliable performance KPIs
- Proactive risk identification
- Faster operational actions
- Continuous improvement loop

PROCESS SUMMARY

The process covers the complete flow from operational data generation, through data preparation, modelling and KPI calculation, to performance monitoring, issue resolution and continuous improvement.

PARTICIPANTS

- Operational Systems (Automatic systems)
- BI Analyst (Data preparation & modelling)
- Power BI Platform (Processing & visualisation)
- Operations Manager (Monitoring & decision-making)
- Carrier & Warehouse Teams (Execution & feedback)
